《骨关节影像鉴别诊断Bone and J》

内容概要

This title is a section extracted from the standard work on radiographic diagnosis - Burgener and Kormano's "Differential Diagnosis in Conventional Radiology". It focuses on the radiographic diagnosis of the skeletal system, allowing the professional to access and make use of the vital information they need for this area of diagnosis in a targeted and, therefore, time- and cost-effective way. By presenting original illustrations of almost all the conditions mentioned in the text alongside tables showing the most important additional differential diagnostic information, the book points to the correct diagnosis even in difficult cases.

《骨关节影像鉴别诊断Bone and J》
