内容概要

As the only book available on the topic, this text provides a unique look at both traditional techniques and cutting-edge information on the specific management of pediatric oral and maxillofacial surgery. Vivid photographs from all stages of the surgical procedures highlight the discussions and explanations from the premier authorities in the field. Coverage encompasses all areas of treating pediatric patients, including growth and development, psychological management, anesthesia and sedation, metabolic management, genetics, and speech problems. * Full-color format featuring step-by-step photos and detailed drawings illustrate each technique and visualize key concepts.

- * Discussions of both common and uncommon procedures provide an understanding of the timing of treatment and the prevention of potential problems.
- * Material on speech disorders demonstrates the risk factors and craniofacial relationships for the surgeon to consider when determining functional outcomes.
- * A chapter dedicated to molecular genetics and syndrome recognition supplies the reader with knowledge of genetics that can assist in diagnosis and development of treatment.
- * Descriptions of the principles and changes of facial growth in children help to develop a rational treatment plan.
- * Subject matter relating to anesthesia and sedation in pediatric patients presents important management challenges and suggests guidelines for procedures.
- * A chapter suggests guidelines for deep sedation and anesthesia in pediatric offices.
- * A chapter on maxillofacial infections covers diagnosis and treatment in an area that comprises a significant part of oral and maxillofacial surgery training and practice.
- * Thorough discussion of salivary gland inflammatory disorders and salivary tumors in children.
- * Extensive features on head and neck tumors in children give insight into the difficult decisions regarding chemotherapy, radiation therapy, and/or resection.
- * Step-by-step analyses of ancillary procedures provide detailed information on pediatric oral and maxillofacial surgery.
- * Comprehensive coverage of orofacial pain, facial fractures, soft tissue abnormalities, and vascular anomalies improves understanding of these sometimes confusing conditions.

作者简介

Leonard B. Kaban, DMD, MD, FACS, Walter C. Guralnick Professor and Chairman, Department of Oral and Maxillofacial Surgery, Massachusetts General Hospital and Harvard School of Dental Medicine, Boston, MA; and Maria J. Troulis

《小儿口腔与上颌外科学Pediatri》

书籍目录

PART I GENERAL CARE OF THE PEDIATRIC SURGICAL PATIENT	Preoperative Assessment of the Pediatric Patient	Marjorie A. Curran	General evaluation	Preoperative laboratory tests	Specific considerations
	Premature infant		Genetic disorders and syndromes	Craniofacial anomalies	
	Cardiovascular disorders		Pulmonary problems	Gastrointestinal disorders	Renal disease
	Hematologic diseases		Neurologic disorders	Endocrinologic disorders	Pregnancy testing
	Psychosocial issues		Conclusion	2 Molecular Genetics and Syndrome	Recognition for the Clinician
	Joan M. Stoler		Molecular genetics	"New genetics	Human Genome Project
	Short primer on molecular genetics		Birth defects	Chromosomal disorders	Single gene disorders
	Nontraditionally inherited disorders		Syndrome recognition for the clinician		Review of medical history
	Family history		Physical examination	Laboratory and testing methods	
	Common syndromes with facial deformity		Branchio-oto-renal-dysplasia	Chemism	
	Nevoid basal cell carcinoma syndrome		Pierre Robin sequence	Conclusion	Psychological Preparation of the Child
	Undergoing a Maxillofacial Surgical Procedure		Myron L. Belfer	Psychological development	
	Initial evaluation of child and parents		Referral	First interview	Approach to the child
	Explaining the procedure		First conversation	Concept of time and use of a calendar	Use of hospital surgical preoperative programs
	special consideration		Anesthesia	Asking the difficult questions	Procedures requiring special consideration
	Distraction osteogenesis		Maxillomandibular or intermaxillary fixation		
	External devices		Grafts	Hospitalization	Acute complications
	again with the parents and child		Dealing with negative psychological reactions.	Offering ongoing contact	Meeting
	Use of the psychological referral postoperatively		Difficult situations with parents	Separated and divorced parents	
	Child with negative prior experience		"You can do what no one else has been able to do		
	Absent mother or father		Additional medical condition(s) with life-threatening dimension		
	"My child is special		Effort to put the child at risk.	Child with preexisting known psychological problems
