## 书籍目录

Preface Units , symbols and abbreviations Structure of the respiratory system : lungs , airways and dead space  
The thoracic cage and respiratory muscles Pressures and volumes during normal breathing Gas laws and  
respiratory symbols Diffusion Lung mechanics : elastic forces Lung mechanics : airway resistance Carriage of  
oxygen Carriage of carbon dioxide Control of acid—base balance Control of breathing : neural mechanisms  
Control of breathing : chemical mechanisms Pulmonary circulation and anatomical right-to-left  
shunts Ventilation perfusion mismatching Development of the respiratory system and birth Complications of  
development and congenital disease Lung defence mechanisms and immunology Pulmonary function tests Chest  
imaging and bronchoscopy Respiratory failure Asthma : pathophysiology Asthma : treatment Chronic  
obstructive pulmonary disease Pulmonary hypertension Venous thromboembolism and pulmonary embolism  
Pulmonary involvement in vasculitis Interstitial lung disease Pleural diseases Pneumothorax Cystic fibrosis and  
bronchiectasis Occupational and environmental—related lung disease Pneumonia Pulmonary tuberculosis  
Respiratory infections in HIV infection Acute respiratory distress syndrome ( ARDS ) Lung cancer  
Sleep-disordered breathing Mechanical ventilation Acute oxygen therapy Case studies Case studies : answers
